DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 01/20/2006 is being considered by the examiner.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The features of claim 14 are so widely formulated that their formulation applies to any process.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 13, 14, 18, and 20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gruendl et al. (DE4126454) in view of Hazucha et al. (7,394,298). Gruendl et al. discloses a linear motor (abstract, "synchronous linear motor") for a

Application/Control Number: 10/565,460

Art Unit: 3617

modular transportation device, comprising: at least one primary part (abstract, "stator section") having a plurality of field-generating coils that are mounted side-by-side along a predetermined route; at least one secondary part (abstract, "exciter part"), wherein the plurality of field-generating coils of the at least one primary part provides a propulsion field for propulsion of the at least one secondary part, and wherein the at least one secondary part is configured to support at least one consumer positioned on the at least one secondary part; and an energy transmitting interface (abstract, "auxiliary devices") interposed between the at least one primary part and the at least one secondary part, wherein an energy supply field having a higher frequency than a frequency of the propulsion field is superposed on the propulsion field, and wherein the energy supply field is inductively coupled via the energy transmitting interface and supplies energy to the at least one consumer positioned on the at least one secondary part (abstract, "for inductively transmitting power, a relatively high frequency alternating current is superimposed on the alternating current which is provided for generating the traveling wave field"). Gruendl discloses the linear motor set forth above, but does not disclose a dc/dc converter. However, Hazucha does disclose a dc/dc converter (see claim 17). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to provide a dc/dc converter disclosed in Gruendl in view of the teaching of Hazucha. The motivation for doing so would have been to be able to operate at differ supply voltages; [claim 14] at least one consumer (electrical load) of Guendl is configured to execute a procedure, being relevant to the application process; [claims 20-22] the coils of Gruendl generate energy and is available for various auxiliary means (see

Page 3

Art Unit: 3617

specification). The energy is also located opposite the secondary part and transmitting interface; [claim 23] Gruendl shows a power supply (EV) that ensures a supply of energy to the auxiliary devices; the subject matter of claim 24 differs from the subject matter of claim 13 only in having a different specified purpose, which has virtually no effect on the scope of protection in an apparatus claim. The linear motor of Gruendl et al. is suitable for the purposed specified in claim 24.

6. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gruendl et al. (DE4126454) in view of Sink (5,497,038). Gruendl discloses the linear motor set forth above, but does not disclose a coil drive circuit. However, Sink does disclose a coil drive circuit (claim 20). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to provide a coil drive circuit disclosed in Gruendl et al. in view of the teaching of Sink. The motivation for doing so would have been to create a traveling field that moves along with each magnet assembly.

Response to Arguments

- 7. Applicant's arguments with respect to claims 13-15 and 18-24 have been considered but are most in view of the new ground(s) of rejection.
- 8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3617

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason C. Smith whose telephone number is (571) 270-5225. The examiner can normally be reached on M- F, 7:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Morano can be reached on (571) 272-6684. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
